

Who we are and what we build

AtlasOA LLC is a Missouri software company building on-premise tools for education. Our products are designed for institutions that want to own their own data, run their own AI, and get real work done without sending student information to third-party clouds.

PRODUCTS

Atlas K-12

A connective MTSS and Care Team platform for K-12 districts. Pulls signals from every system a district already uses, surfaces them in one place, and wraps a coordinated workflow around every student who needs support. Includes Compass AI, an on-premise assistant that runs on your server.

AtlasOA

An outcomes assessment and accreditation platform for technical colleges, community colleges, and specialized institutions. Pre-built crosswalks to NECHE, HLC, SACSCOC, WASC, ACCSC, and Council on Occupational Education. Evidence collection, rubric scoring, and accreditor-ready reports.

FOUNDER

AtlasOA LLC was founded by Ashley Reddick. Ashley teaches information technology at a technical college in the St. Louis area of Missouri and has spent years watching educators struggle to make disconnected systems work together. AtlasOA was built from that classroom experience and the conviction that schools should own their own software, their own data, and their own AI.

PRINCIPLES

- On-premise by default. Your data lives on your server.
- FERPA and COPPA aligned. No third-party cloud dependencies for student data.
- Direct founder access. You can email the founder and get a response.
- Price fairness. Founder rates are locked forever.
- Real classrooms first. Every feature starts with a real teacher, counselor, or dean problem.
